

Stainless steel maintenance

Stainless steel do also needs maintenance to keep nice and shiny. Brown spots can occur on stainless steel parts that are in contact with salt water, especially stainless steel anchor equipment that are exposed for extreme environment.

If brown spots occur its important to wash the surface to maintain the nice and shiny surface of high polish stainless steel.

Use Anchorlift Stainless Steel cleaner (Hugos), chrome polish or other steel cleaners.

Rub until al brown spots are gone.

Rinse with water.

Cleaning the stainless steel regularly will help to keep the nice and shiny finish better.
