

## Anchorlift DB chain/rope combo maintenance.

For the DB rope chain combo will stay soft and seem like it should, over time, it is important to maintenance. Over time salt, mud and sand will penetrate into the rope and make the splice and rope stiffer. Every 3 to 6 month depending on use you must rinse the rope in fresh water to remove salt, mud and sand.

Fill a bowl of freshwater  
Ensure that all the rope are well  
under water.

Move the rope round the bowl so all the salt and clay  
disappears from the rope.  
Move around 3 - 4 times during 1 - 2 hour.

Fill the bowl with fabric softner and water.  
1 part softner 3 part water.  
Approx 2 gallon / 12l in total.

Lay the rope in the bowl and stay approx 6 hour.  
Rinse with fresh water 1 time.
