

# ANCHORLIFT™ Technic

## Anchorlift XR Anchor

Anchorlift XR anchor is specifically designed to get the anchor parked so close to the bow as possible. The special design of anchor wing allows the anchor not beating in the bow when parked in roller. Anchor arm also has its function in that the anchor goes out and clear of the bow before it goes down. Low weight has also been important without it having gone out of the anchor's holding power, as this is intended to be used on sport fishing boats and other boats which will have as little weight in the bow as possible. Anchorlift XR anchor is made of the same physical sizes as the famous Bruce anchor, but the weight is only about 65% compared with the Bruce anchor.

Anchorlift XR anchor is made of Aisi 316L high polish stainless steel. Made in Europe.

Available in Sizes XR6 - XR8 - XR10 - XR15 - XR20 - XR25 - XR30 - XR40 - XR50 - XR80 - XR120

XR 6 Boats to 25ft

XR 8 Boats to 28ft

XR 10 Boats to 35ft

XR 15 Boats to 40ft

XR 20 Boats to 50ft

XR 25 Boats to 50ft

XR 30 Boats to 60ft

XR 40 Boats to 65ft

XR 50 Boats to 75ft
